# Legal Disclaimer

**The decisions that you make to invest with MIRA can lead you to a massive loss or even massive profit in a short period of time. So as we go through everything will be all to what market we have right now. MIRA can't guarantee that the investors will not lose money so please invest at your own risk.**

The information that you will see on our website does not promote or give any legal advice to invest your money to the project. As we write this white paper the creators of MIRA truly believe that the future and fortune awaits for the project and early supporters of the project.

MIRA's Team won't be doxxing at the moment but once the token is launched on decentralized exchange we will surely do. To also give assurance to investors as we promote a safest place to people will do it in action.

So we recommend you to consult Legal, Financial, Tax, and other Professional Advisors or Experts for guidance before participating on some events like Private Sale, Presale, or any token sale that the project has. We strongly advise that you take legal advice on any respected legal advisors before taking part of any legality in your own jurisdiction on participating in token sale involving your own money.

"This day November 26 Friday 11:03pm, The idea of combining the power of cryptography and blockchain technology. The founders of Mira Protocol are about to create a crypto wallet that ensures your privacy by cryptography.

By doing that the privacy address of the person who made a transaction will be coded with our own develop cipher. It will provide math and computation very soon. The Cipher won't be told to anyone. Only one person will know."

CEO OF MIRA

# **Abstract**

MIRA is a decentralized project that aims to recreate and improve the privacy of its people and bring the infinite possibilities of private securities inside of blockchain technologies.

The project MIRA brings the out of the box thinking that allows users to have assurance that they are safe in blockchain. Therefore the project is giving an opportunity to the people mainly for early supporters. To achieve the goal of the project is to help and give business opportunities as well inside of the blockchain technologies.

The following information that you will see will describe the MIRA and to give enlightenment for you to know the designs and ideas that we are trying to discuss in this white paper.

The MIRA Project will make sure things that are written in here will make it happen in the near future.

# What is MIRA?

Mira is a Decentralized Protocol that could give and explore a new way of knowledge and give business opportunities to its people. Mira is trying to create a cipher that will encrypt the contract address of the person who is using the Mira Wallet.

Compared to the other companies like MetaMask, Trust Wallet, Coinbase etc. MIRA is trying to improve the wallet function that we are currently using right now. The theory of encrypting the contract address on the privacy wallet by the help of cryptography. Will definitely make it happen at all costs

Nowadays people are now lured into some scams taking advantage of blockchain. The contract address is very visible to see in blockchain so it could easily know how much balance you have. MIRA is trying to protect its users by encrypting the contract address of the person.

It is very easy to be in touch with the person that has a big size of bags in his wallet. Therefore scammers could easily track what the person was buying and easily trace him.

To be assured that you won't be tracked in blockchain technologies MIRA is here to give a peaceful place for everyone.

Mira Protocol provides to each user of the product to have a decentralized and a safe place to store their datas and assets in Mira Wallet.

Provides a very good strategy and a unique technology to have a better future for holders.

# MIRA Wallet

Mira is here to present to you a recreation of new technology that we have right now allows millions of people to have access to web 3.0 by using web browser extensions and applications. The technology that we are presenting also concludes that the victims of scams out there inside the blockchain will surely be an end.

Just like the other applications that we've seen, The wallet will provide you an access wallet key that ensures no one or even the MIRA Team doesn't have any access to it or mostly we called it "Secret Recovery Phrase". To be sure that the only capable of accessing the wallet key is only the wallet holder is responsible for protecting the Access Wallet Key or Secret Recovery Phrase.

MIRA also includes that the every transaction that made will encrypt the own contract address of the wallet holder for every 6 seconds that happen it change the contract address that reflecting on BSCSCAN or ETHERSCAN but the original contract address will still remains for big great scenario of transferring your account on other platform that provides same functionalities of the MIRA Wallet.

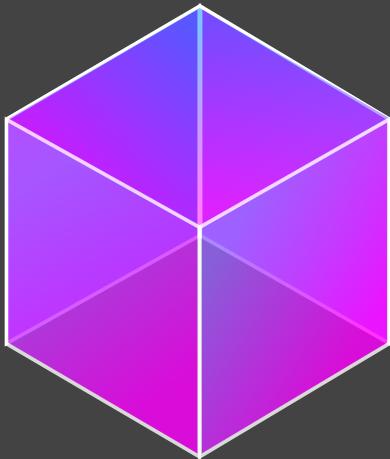

# The MIRA's Code

The MIRA's code is a self developed cipher by the CEO of the MIRA's Project. These will explain on the following;

The develop code will allow users to control and change the contract address of the person by using the MIRA Wallet extension. The power of cryptography will encrypt the contract address and every 6 seconds the contract address of the user on the MIRA Wallet will change.

Every 6 seconds will change with a total of 14,400 combinations per day of every wallet that has been used inside of the MIRA's Wallet.

The effect of that is that people in the blockchain could see the transaction in the bscscan or etherscan but if they tried to search the encrypted contract address, there will be no user that could be found because once they search it through the web it will give an error message.

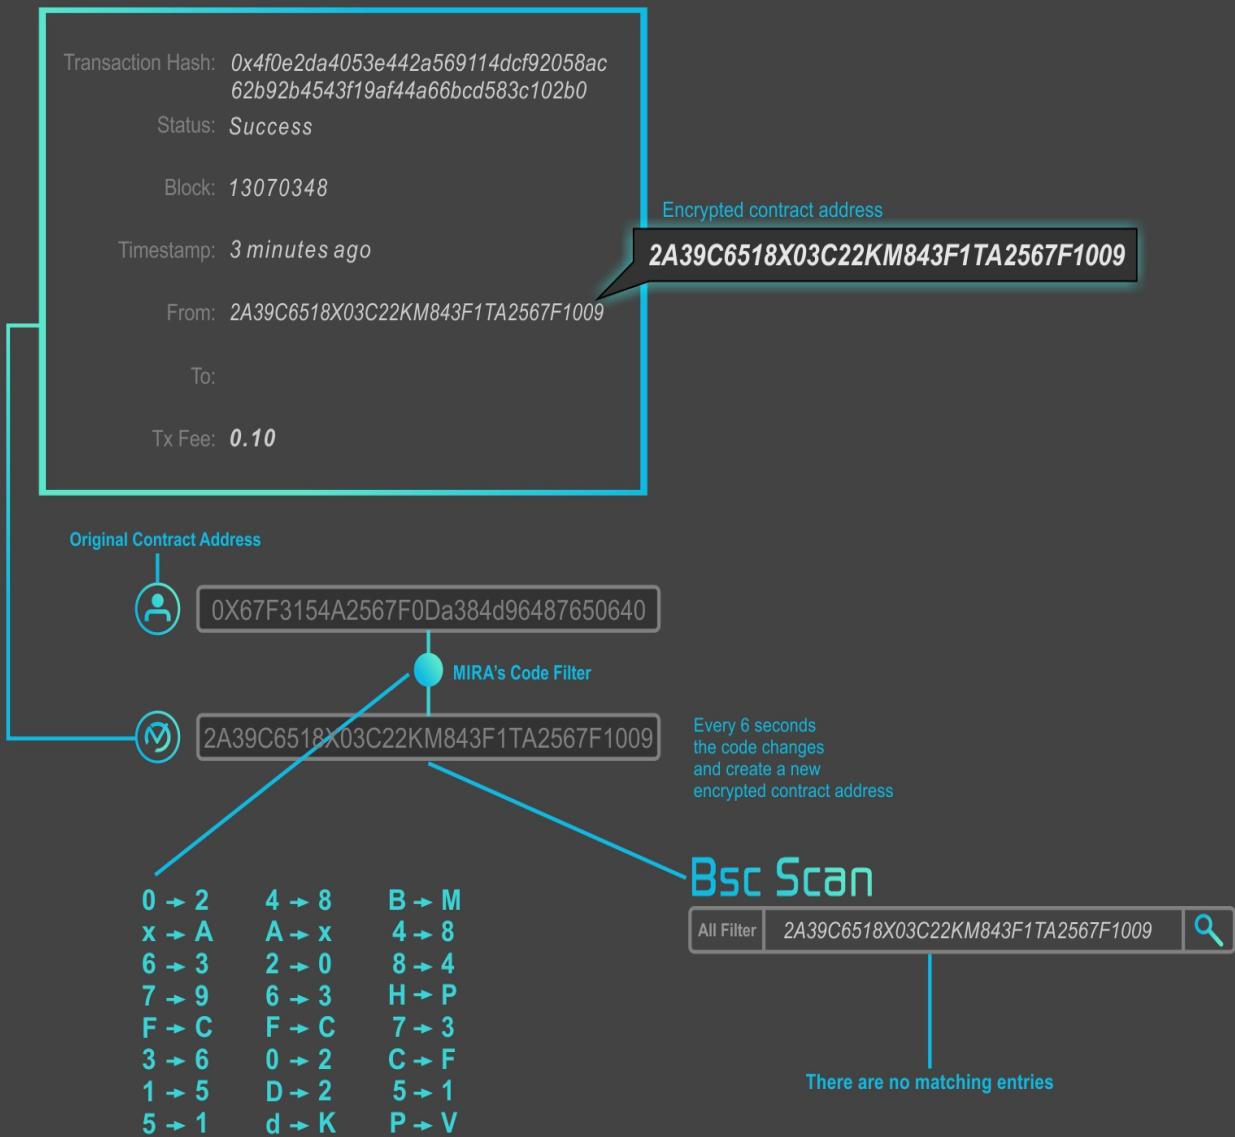

6 seconds time frame for  
changing of code

14,400 combinations for one smart  
contracts everyday

# Structure & Design

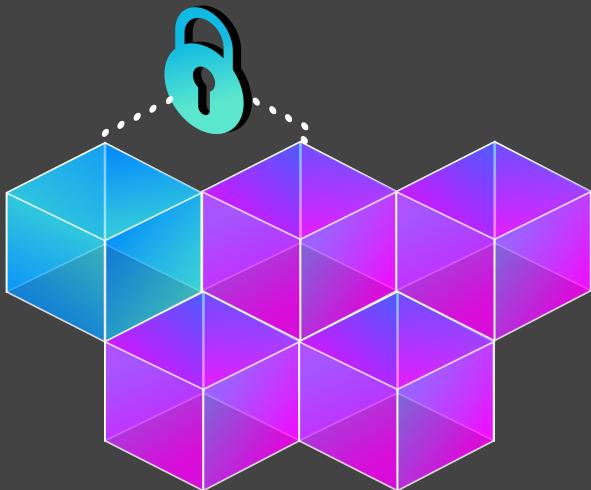

# Why MIRA?

It only proves that the technology that we have right now tells us that everything is possible. The creation of one to another is infinite and it's like we are living on different timelines of our life that separate the things that we've seen and not.

Cryptocurrency is a technology that we are having right now. The birth of Bitcoin created chaos in people's minds. Some doubted, ignored, learned, and most likely to create an idea that could change the world.

Now as we go through we are trying to showcase what MIRA can do inside of blockchain technology.

Building a Decentralized Privacy Wallet by integrating with web 3.0

Recreate and Improve wallet extension and application.

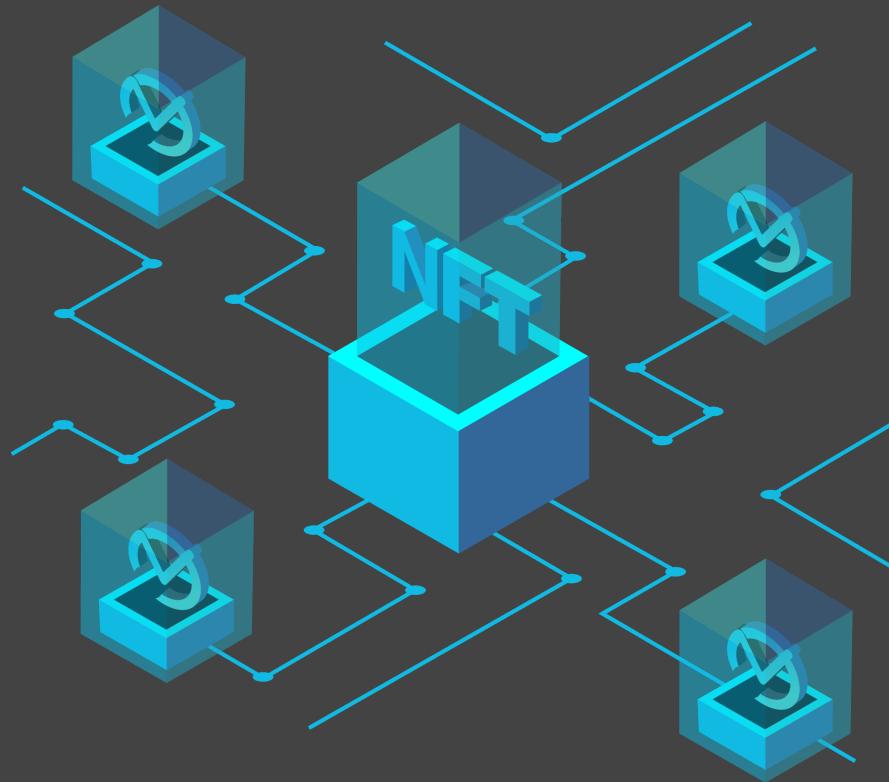

Coded Smart Contract by MIRA's Code.

Secured and the future of Decentralization of holding funds.

## MIRA Technology

- MIRA's Code: Gives an algorithm that counts and possibly changes multiple times of the person's contract address on his MIRA wallet.
- Blockchain: Expanding to Ethereum, Harmony, and Avalanche network.
- Miraswap: Offers for people to use tremendous low fees that they want.
- NFT Puzzle: MIRA's Team will going to create a puzzle that invites all the cryptographers around the world and in return have a spot on the team and will improve the MIRA's technology in the future

NFT will be an exciting game in 2022 for MIRA will hold do for the community and reward them a spot on the company.

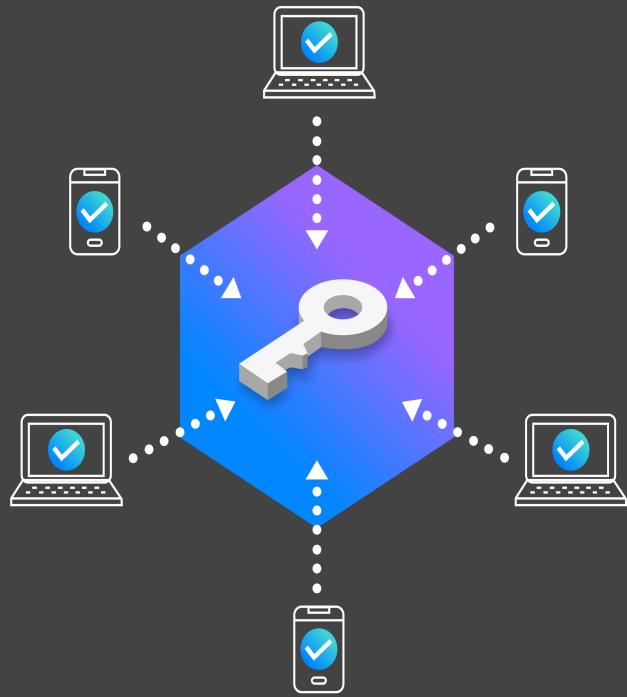

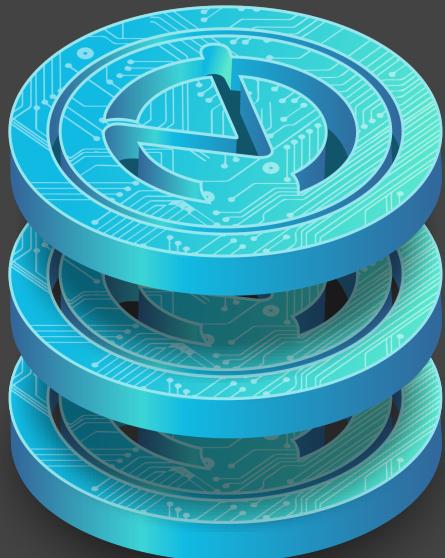

# MIRA Token

MIRA is a decentralized digital currency built on Binance Smart Chain(BEP-20) using smart contracts and tokenomics will be listed down ahead. The total supply of MIRA Token is 1 billion tokens(1,000,000,000)

Name: MIRA Protocol

Symbol: MIRA

Decimals: 18

# Token Economics

- Private Sale (7%) - TBD
- Presale (20%) - via Pinksale  
Presale & Token Creation
- Development (7%) - Smart  
Contract Backend & Frontend, R&D,  
and Website UI/UX
- Marketing (7%) - Exposure and Improvement for  
awareness of the Project
- Ecosystem (9%) - Supports to the project  
and Partnerships
- Liquidity (20%) - Locked though Pinksale
- Product (10%) - Product development
- Advisory (5%) - Help and Guide coming  
from advisor
- Team (15%) - Incentives for the whole team  
to paid their exert effort.

## Tax Distributions:

To establish the growth of MIRA and give our market a steady growth. MIRA will have 13% TAX on all kinds transactions;

Sending Tokens from another wallet

Buying Tokens

Selling Tokens

4% Added to liquidity

4% Reflections

4% Marketing Wallet

## Governance

MIRA is designed to be a governance token which could potentially help in the future. To have the most transparent way of running an economy governance will be the most innovative way that could help the future of the token and the company. For some cases it also includes the decision making to the budget of funds and expansion of holders from people around the globe.

MIRA is a decentralized protocol that wants to improve and recreate the old types of holding of assets into our very own wallets. MIRA gives a guarantee that the space of the application that people will use in the future is secured and will never be afraid of anything that will possibly happen.

## MIRA Principles

The principles of MIRA Foundation is all about the things where it started. It's mostly that the idea runs to my head while creating this project. Most people will be concerned that this idea will fail but then again. The idea is born and we can establish this project to create the safest place in defi I'm making this project and I will root for you all. For those who will support and trust the project. We could possibly change the defi space...We will, It will happen, and we are going to do everything to make it happen.
